

LOST and FOUND

Tracking System

Background of the Problem

Lost items are usually:

- Posted on social media (e.g., Facebook groups)
- Reported to the Student Local Government Office
- No centralized tracking system
- Delays in returning items
- Risk of lost records or misinformation

Proposed Solution

To address these problems, we propose a web-based Lost and Found Tracking System.

The system will allow:

- Users to report lost items
- Staff to log found items
- Matching of lost and found records
- Real-time tracking of item status
- Notification to users when items are matched
